Sayand P

Data Analyst — SQL · Business Intelligence · Statistics

+91 9633427499 · sayandp0@gmail.com · linkedin.com/in/sayand-p-2215a9225 · github.com/sayandp · sayandp.github.io · Kozhikode, Kerala · Open to remote

Statistics graduate who turns messy data into decisions, and reconciles the numbers before presenting them. Seeking a Data Analyst role, remote.

PROJECTS

E-commerce SQL Analytics Dashboard

github.com/sayandp/ecommerce-dashboard

- Answered revenue, retention and customer-value questions in SQL: monthly revenue trends, category performance, payment-method mix, RFM customer segmentation and cohort retention analysis, surfaced in an interactive dashboard with drill-down filters.

Stack: SQL (SQLite), Python, pandas, Plotly, Streamlit

India GDP Nowcaster

github.com/sayandp/india-gdp-nowcaster

- Nowcasts quarterly GDP from monthly indicators ahead of official release, backtested against first-print vintages rather than revised figures and scored against a naive rule so the result shows whether the model beats doing nothing.

Stack: Python, pandas, time-series backtesting

Agentic Data Intelligence Platform

PG Diploma capstone · github.com/sayandp/agentic-data-intelligence-platform

- Found and corrected a value-basis error in a 1.07M-row retail dataset where unit prices were being summed as if they were line totals — it had put bookkeeping entries (manual adjustments, marketplace fees) at the top of the revenue ranking and understated reported totals. Correcting it changed which products the report called best sellers.
- Built automated data-quality validation across 46 datasets: schema drift, null floods and distribution shifts caught on every new file, with each automated repair re-validated and reverted if it failed.
- Generated analytics reports where every number traces back to verified source data, with deterministic checks for numeric fidelity and claim coverage before a report is released.

Stack: Python, LangGraph, FastAPI, React, Postgres, Playwright, Gemini

Kerala Crop Price Forecaster

Live Telegram bot (Malayalam) · github.com/sayandp/kerala-crop-forecaster

- Built and deployed a free Malayalam price service for farmers: today's mandi price for 17 crops across every Kerala market, a 7-day outlook, and user-set price alerts. Refreshes itself daily; runs entirely on free tiers at ₹0/month.
- Trained LightGBM on 750,000 price records since 2018 and found it could not beat a naive "tomorrow = today" rule at 1–7 day horizons; shipped the naive forecast with a calibrated interval (~80% coverage) and gated the model to the horizons where it demonstrably wins.
- Automated the lifecycle end to end: scheduled ingest and retraining through GitHub Actions, experiment tracking and model registry in MLflow, drift monitoring on incoming data.

Stack: Python, LightGBM, MLflow, GitHub Actions, Postgres, FastAPI, Next.js, Telegram Bot API

TECHNICAL SKILLS

SQL	Window functions, CTEs, joins, aggregation, query optimisation
Business intelligence	Power BI, Tableau, Plotly, Streamlit, Excel pivot tables
Analysis	Exploratory analysis, RFM segmentation, cohort retention, forecasting, data quality validation
Statistics	Hypothesis testing, regression, sampling, multivariate techniques
Tools	Python (pandas, numpy), Postgres, Git

EDUCATION

PG Diploma, Data Science & Analytics — University of Calicut 2025 – 2026

B.Sc. Statistics with Data Science — University of Calicut 2021 – 2024 · First Class

ALSO BUILT

Kerala flood risk intelligence system (Random Forest, SHAP, geospatial) · Sahayi bilingual retrieval assistant · Loan default risk engine · Telco churn, Premier League and demand-forecasting apps deployed on Streamlit
